

Ballistic Blanket Kit

Product Images

Short Description

ROFI Ballistic Blanket Kit is tailor-made protection for installation in vehicles, 4 WDs and trucks, to prevent the impact of fragments from anti-personnel mines when detonated by the vehicle. Each Kit is tailor-made for a particular vehicle model, consisting of a number of blankets protecting against fragments. ROFI Wheel Arch Panel is designed to withstand and deflect the effects of a detonation, reducing the impact to the cabin of the vehicle.

Description

Several leading UN agencies have acknowledged the benefits from this ballistic protection system, which prevents the impact from anti-personnel mines, having ROFI or one of our installation partners worldwide to install the blankets in various vehicles.

The combination of ROFI Ballistic Blanket Kit and ROFI Wheel Arch Panel protects against all known anti-personnel blast mines. The combination is tested against DM31 mine, containing 540 g of TNT and 400 steel fragments, total weight 4 kg.

In co-operation with the Norwegian Army and NGOs specialized in dealing with land mines, ROFI carries out a continuous program to combine field experience with the latest technology to design solutions that are characterized by functionality in installation, best possible protection and low weight.

Key features:

- PROTECTION - STANAG 2920 and other international standards
- FRAGMENT PROTECTION - Tested and proven to protect against blast and fragment charges
- TAILOR MADE - For each type of vehicle
- ERGONOMICS - Optimal weight distribution for freedom of movement. Can be delivered in various sizes
- DURABILITY - High-end quality and longer life span
- PRICE-PERFORMANCE - The long lasting quality provides beneficial Life Cycle Cost

- AVAILABILITY - We have products in stock for short delivery time.

Additional Information

Ballistic Suppression	Aramid fiber
Protection level STANAG 2920	V50 600 m/s
Weight	8 kg/sqm
Sizes available	custom
Machine Washable	No
Water Repellent	No
Ventilation	No
